No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ŧ
                                                                                                                           A novel DNA segment (AAT34162) has an isolated sequence region defined as the Fas gene promoter region. This includes a number of transcription factor binding sites. A coding sequence for its also included. The DNA segment was isolated from leader peptide corresponding to nt 23-346. It can be combined with a structural gene so that the gene is under the transcriptional control of the transcription factor binding sites. The promoter region can be used a means of treating Fas-mediated apoptosis disorders such as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and including eye diseases arterioscierosis, anaemia, cancer, acute myeloid generation, afterioscierosis, anaemia, cancer is disease, AIDS, epilepsy, nulcerative bowel leukaemia, althelmer's disease, and inflammatory vulcerative bowel rheumatoid arthritis, psoriasis and inflammatory vulcerative howel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δõ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        В
                                                                                                                                This invention describes a novel p53-binding region of a human CD95 receptor DNA molecule. The p53-binding region, or a vector containing it, can be used to screen for apoptosis modulating substances potentially useful for canneer chemotherapy. This sequence represents a fragment of the human CD95 receptor intron 1 which contains a p53 bind
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           γQ

The present sequence encodes human Fas (Apo-1). The specification describes antisense compounds which are targeted to the 5' untranslated region, translational start site, translational termination region of 3' untranslated region of nucleic acid molecules encoding Fas, Fas phosphatase). The antisense compounds are used to inhibit the expression of Fas, Fast or Fap-1 in cells or tissues. They are used to treat autoimmune or inflammatory diseases such as hepatitis. They can also be used to treat cancer, especially colon, liver or lung
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAC61798

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC (see AAW98070). The invention provides a method for inhibiting a colimunosuppressive agent which inhibits the proinflammatory response in a cell mixture by administering an CC immunosuppressive agent which inhibits the proinflammatory activity of Fas ligand (Fasi). In some embodiments, Fasi is coadministered comparison to the immunosuppressive agent, and the cell mixture comprises completely inhibit endogenous embodiments, Fasi is coadministered compressive agent, and the cell mixture comprises completely inhibit endogenous pressive agents include antisense completely inhibit endogenous Fasi egents include antisense considered that inhibit endogenous Fasi egents that inhibit endogenous Fasi egents that induce the compressive agents that induce the compressive agents that induce the compressive agents that induce the compressive agent such as completely expression of transforming growth factor (TGF)-beta. The method can be used for treating diseases associated completely expenses host disease, or an autoimmune disease such as completely expenses agent such as completely expense to the complete expense of the comple
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     polyA_signal

The cDNA was ligated to BstXI-cut vector pcEV4 via BstXI linkers. The KT3 cDNA library was used to transfect monkey coscatis which were then suspended in buffer containing murine anti-Pas attibodies. The Fas expressing cells adhered with goat anti-mouse extrachromosomal DNA was prepared from adhered to the plates. Extrachromosomal DNA was prepared from adhered to the plates and used to consitive clone (pF3) was used to screen the KT-3 cDNA library. The longest cDNA clone was designated pF58 and contains an ORF corresp. (i.e. human Fas antigen).

Preparation of soluble membrane proteins  $\cdot$  for their use in antibody production for the treatment and prevention of related diseases

Example 1; Pages 15-17; 51pp; Japanese.

AAQ95297 is the plasmid pF58 which contains the human Fas cDNA. The plasmid was used in the construction of an expression vector for the prodn. of recombinant soluble membrane proteins. The proteins the prodn be used in antibody prodn. for the treatment and prevention of can be used in antibody prodn. for the treatment and prevention of

Sequence 2534 BP; 817 A; 487 C; 503 G; 727 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WO9601277-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        03-MAR-1995;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     18-JAN-1996.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents the coding sequence for the human Fas antigen contained within the plasmid pCEV4/DFas. The soluble Fas antigen is included in the immunoassay kit of the invention. The kit is for the included in the immunoassay kit of the invention. The kit is for the say of soluble Fas antigen and contains an immobilised anti-soluble Fas assay is standard soluble Fas antigen encoded monoclonal antibody, as well as the standard soluble Fas antigen encoded by this sequence. The assay is simple and has high accuracy, high sensitivity, and is capable of assaying a number of different specimens at the same time. The immunoassay is used on biological samples (such as serum) and is useful for diagnosis of autoimmune diseases such as rheumatoid arthritis or systemic lupus erythematosus (SLE).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       06-JUL-1994;

```
CC depletion of the invention. The method is concerned with reducing CC depletion of activated Fas-expressing CD8+ T-lymphocyte killer (TK) Cells in an immune cell population which also comprises of Fas-igand CC immune cell population which also comprises of Fas-igand CC immune cell population with an effective amount of an agent (e.g. a cc identifying suitable agents which can reduce depletion of activated CC is soluble Fas-Fc fusion protein) which would interfere with the cg. a cc identifying suitable agents which can reduce depletion of activated CC fas-expressing CD8+ TK cells in immune cell populations. Also claimed CC is the use of the agent in the manufacture of therapeutic compositions. CC cell surface receptor Fas and its ligand Fast. By interaction of the cc and its interaction, the method described and its preparations can prevent CC apoptosis of CD8+ TK lymphocytes caused by expression of Fast on activated CD4+ cells. Such Fast-expressing activated CD4+ cells of CD4+ cell infection with an immunodeficiency virus (STV). The claimed prevention of apoptosis may then allow cc treatment (prophylactic and/or therapeutic) of immunodeficiency virus (GTI) activity contained contained prevention of apoptosis may then allow treatment (prophylactic and/or therapeutic) of immunodeficiency.
Sequence 2534 BP; 817 A; 487 C; 503 G; 727 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                   Reducing CD8+ lymphocyte apoptosis to treat e.g. immunodeficiency diseases - by interfering with interaction of Fas with Fas-ligand expressed on activated CD4+ cells, e.g. cells infected with HIV
                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; Fig 10; 71pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes immunogenic portions of lung tumour-
CC associated proteins (I) and the nucleic acids (NAS) that encode them.
CC (I) have cytostatic activity and can be used in gene therapy, antisense
CC (inhibition and in vaccines. The NAs and the lung tumour-associated
CC proteins they encode may be used in the prevention, treatment and
CC diagnosis of diseases associated with their inappropriate expression,
CC diagnosis of diseases py rectifying mutations or deletions in a patient's genome
CC treat diseases by rectifying mutations or deletions in a patient's genome
CC that affect the activity of the production of (I). Additionally, the
CC NAS may be used to produce the lung-tumour associated protein, according
CC to standard recombinant DNA methodology. Conversely, antisense NA
CC to standard recombinant DNA methodology. Conversely, antisense NA
CC binding with the cells own genes and preventing their expression. The NA
CC and complementary sequences may also be used as DNA probes in diagnostic
CC and complementary sequences may also be used as DNA probes in diagnostic
CC and complementary sequences may also be used as DNA probes in diagnostic
CC and sasays to detect and quantitate the presence of similar NA sequences in
CC assimilar NA sequences in need of treatment for lung
camples, and hence which patients may be in need of treatment for lung
camples, and activity of the protein. AAF68083 to AAF68878 and
CC AAB76848 to AAB76878 represent human lung tumour protein related
CC of the present invention.

                                                                                                                                           The present sequence represents an oncogene from the present invention. The present invention describes a composition which comprises two cytoplasmic oncogene or proto-oncogene selected from ras, raf, EGF-1, C-yes. The second oligonucleotide is specific for a proto-oncogene selected from ras, raf, EGF-1, proto-oncogene selected from proto-oncogene or proto-oncogene or proto-oncogene or proto-oncogene or proto-oncogene or proto-oncogene or proto-oncogene selected from myc, jun, c-ets, c-fos, c-myb, B-myb, C-rel, c-vav, c-ski, c-spi, cyclin Dl, pML/RAR alpha , AMLL/MTGB, The combination of antisense oligonucleotides has synergistically enhanced ability to inhibit growth of cancer cells.

CBIO 15A, UK. E-mail enquiries: humquery@sanger.ac.uk CBIO 15A, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk clone During sequence assembly data is compared from overlapping clones wariation annotation may not be found in the sequence wersion replaced as variations only a small overlap as described above. Note that the This sequence was finished as follows unless otherwise noted: all as compared from overlapping clone name. Note that the Chemistry or covered by high quality data (i.e., phred quality > a stempt was made to resolve all sequencing problems, such abbreviations and repeats; all regions were covered by at least the one plasmid subclone or more than one MI3 subclone; and the sasembly was confirmed by restriction digest. The following surspansions are used to associate primary accession numbers given the feature table with their source databases: Em: EMBL; Sw:, http://www.sanger.ac.uk/Protente/
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 10, constructed by the Sanger Centre Chromosome 10, Further information can be found at RPII-399019 is from the library RPCI-11, 2 constructed by the group
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            615 GÁGGTGGGCATGGGGGGGGGACAGGAATTGAAGCGGAAGTCTGGGAAGCTTTAGGGGTCGC 674
